

Wheel Protectors® Steel QuikStik® Rolls

Non-Lead

Low environmental impact

QuikTab® Feature

Easy-to-peel protective backing

Wheel Protectors® Corrosion-Free Coating

Protects wheel from discoloration & rust

Unique Isosceles Trapezoid Design

Allows for easy contouring to any wheel without bridging, which causes failure

No Measuring

Pre-segmented for quick weight selection

No Cutting

Easy to tear paper backing reduces installation times

No Waste

Dispense only what you need for the job

Proven Adhesive

Sticks faster and holds longer

Components of a Superior Adhesive Wheel Weight

Density

Compared to composite plastic, the higher density of steel allows for the most precise balance. Less dense alternatives with lower density reduce balancing efficiency.

Ease of Use

It doesn't get much easier, or convenient, than having a pre-segmented weight with our QuikTab® feature. Measuring and cutting create additional installation time.

OE Design

Product has been designed and tested to the highest OE standards. The SST/SSG weights are the OE adhesive standard in North America.

Low Profile Availability

Some vehicles require a low profile wheel weight for caliper clearance.

Packaging

A standard box allows you to organize and manage your inventory using one system.
