**To:** All Perfect Equipment Inc. Customers  
**From:** Scott Flynn  
**Subject:** Lead Free Adhesive Wheel Weight

There is growing concern for lead wheel weights and lead's impact on the environment. Europe has already mandated the elimination of lead and the U.S. EPA is considering similar measures. To ensure the market has an effective alternative, Perfect Equipment Inc. has designed, and is producing adhesive wheel weights made from the most widely used material in the automotive industry; *steel*. The high cost and low density of composite plastics and dynamic media make steel the only logical choice for a non-lead adhesive weight. These weights have the same functionality, appearance, and fit characteristics as conventional adhesive wheel weights. These non-lead weights are designed and produced for cars with both steel and alloy wheels, and are coated with our Wheel Protectors® coating.

**SSG060N**

- 5 Gram Increments
- Low Profile
- 60 Grams Per Piece
- 25 Pieces Per Box

**SST300N**

- 0.25 Ounce Increments
- Standard Profile
- 3 Ounces Per Piece
- 25 Pieces Per Box

***New Product, Same Great Features and Benefits!***
