

**EXPERT'S
ADVICE**

**TRUCKS, SUVS & VANS
SHOWN ON OTHER SIDE**

- ① May require LT1/LTZ OR TAL/TALZ truck weight
- ④ Decorative chrome wheels require "TN" series.
- ⑤ Some vehicles equipped with US-produced wheels. These wheels have different inboard / outboard configurations. Verify series with RCR 1.

7 Some models equipped with wheels that have no outside flange. Use adhesive weights inside the wheel and "MCN" weights on the inside flange.

adhesive weights inside the wheel and "® Harley Davidson Edition uses "I H" series.

After installing the weight, check to make sure that it is secured properly.

How To Use This Guide

To help ensure customer satisfaction and vehicle safety, it is important that the correct wheel balance weight application be installed on all wheel types, including OE, alloy and aftermarket wheels. For OE alloy wheels, you can use this alphabetically organized application guide by locating the make & model for the vehicle you are servicing. Once the vehicle is located, intersect the make name with the model year to locate the correct weight series type and weight code. For aftermarket wheels, or specialty OE wheels, always use a rim flange gauge to determine the correct application or use QuickStik® adhesive wheel weight.

Located on the chart, a light grey fill section indicates vehicle was either not manufactured or not factory equipped with alloy wheel option for that particular model year.

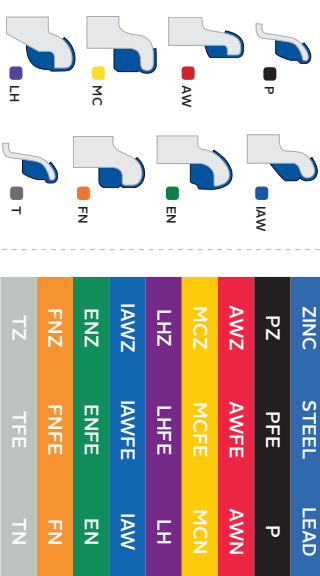

MC Solid color fill section with a weight clip series name indication means that the make/model/year combination you are searching for utilized the referenced weight series.

Mixed color sections mean that the weight series shown on the left is the primary application, while the one on the right could also be correct. The left weight is typically the outboard flange and the right is the inboard flange. This should be confirmed using a rim flange gauge.

If the application you are searching for is not shown, or the referenced weight series does not fit the wheel flange use a rim flange gauge to confirm the rim flange shape and determine the correct application for the job.

Clip Profiles

Materials Conversion Chart

Important Notice:

- Some wheels feature rim flanges that are not intended for clip-on wheel weights and are only added for decoration purposes. All rim flanges that are less than 3/16" deep should utilize an adhesive wheel weight.
- Always use coated wheel weights
- Always check brake idler clearance to the weights with a minimum of 1/8"
- When in doubt, always verify applications with a rim flange guard (Part # R4P)
- Wheel balance weights should always be installed by a professional technician
- During the wrong wheel balance operation or during a repair, resultant damage to the wheel or rim flange can impair the operation of the tire and result in a safety hazard.
- Vehicle and rim manufacturer requirements, as well as state and local inspection laws, must always be observed
- Applications provided in this guide are for reference only and may not be exhaustive or apply to all make and model options
- All application information within is subject to change without notice
- Manufacturer assumes no liability for loss or damage resulting from the incorrect or deficient installation of balance weights or because of a failure to observe applicable associated requirements.
